

## **VPython Homework:**

You must work individually on all homework.

Create an animation – it can be a game or it can teach a science lesson in 3D.

You must include:

1. At least 2 variables.
2. At least 1 loop.
3. At least 1 condition.

Submission: Post your VPython activity on the D2L discussion board titled VPython so everyone can see it.

### **Submission Guidelines:**

1. Post the URL (after saving click **share** to get a sharable link you can copy).
2. Test the URL in another browser to ensure that it is working.
3. In your own words explain what you did in your post.
4. If you remixed an existing project, submit the original URL as well and tell us what is different in both versions (it should be significantly different!).
5. To get full credit on this assignment, you must try **two** of your classmates' activities and reply to their post letting them know what you thought and learned from it.
