

Submission Dropbox: Messenger:

Create the Messenger App we did in class and try to borrow an android device (preferable) and submit a screenshot showing it asking which app to use to send the message on your device. You may use the emulator if you cannot test on a device though it won't have the same effect.

Submission:

- a. Zipped code
- b. Screenshots of the message screen as well as the screen letting you choose the app which will send the message (email, etc)
