

Views, Indexes, and DBMS Lifecycle

Go to the D2L folder in the Assignments tab titled Views and More and submit the following:

1. Describe your own scenario (not from the notes/hw) where a view would be helpful.
2. Explain what indexes are.
3. Choose a stage in the database system development lifecycle. In your own words, describe it and discuss why you feel it's important.

As always, answers must be in your own words.
